Principal Engineer, PayRoute (fintech) (2016 - 2024)

Owned the integration layer connecting 30 bank APIs; made the build vs buy call for the reconciliation engine and chose not to touch the legacy ledger.

Acted as the de facto product owner for the platform team with no PM above us, turning merchant requirements into specs.

Led the response to a 2019 settlement outage; I owned the fix and patched it within 48 hours.

Engineer, early-stage startup, the first engineering hire (2014 - 2016)

Built the first version of the merchant dashboard from scratch.
